ABRAR ZAHIN

650 E Tyler Mall Tempe, Arizona 85281

Personal Summary

Statistical machine learning researcher with expertise in generative AI, multimodal learning, and large-scale model optimization. My research focuses on diffusion models, 3D and video generation, and retrieval-augmented systems, with a strong foundation in probabilistic modeling and efficient inference techniques. I bring experience developing scalable ML pipelines using PyTorch, leveraging high-performance computing, and optimizing models for deployment. Passionate about connecting foundational research to real-world applications in controllable content synthesis and embodied AI.

Skills Summary

Languages: Python, MATLAB, SQL, SPSS, SAS, R, C, and C++

Frameworks and Libraries: PyTorch, TensorFlow, JAX, Keras, Pandas, NumPy, Scikit, NLTK, OpenCV, Matplotlib

Data Visualization and Analysis: Tableau, Microsoft PowerBI, Seaborn, GraphPad

High-Performance Computing: Batch Scripting, Python Multi-Processing, GPU Clusters, Cython

Cloud Development: AWS, GCP, Docker, MySQL

DevOps: CI/CD (Azure DevOps, GitHub Actions, Jenkins), Git, FastAPI, Flask, REST APIs

Research & Technical Expertise: Statistical Machine Learning, Generative AI (Diffusion Models, GANs), Multimodal Learning (Vision-Language, 3D, Video), Retrieval-Augmented Generation (RAG), Probabilistic Modeling & Inference, Causal Learning & Model Interpretability, and Embodied AI and Reinforcement Learning

Education

Arizona State University (ASU): PhD in Electrical Engineering

Jan 2020 – Current

Utah State University (USU): MSc in Electrical Engineering

Aug 2017 - Dec 2019

Research Papers (Published)

Robust Model Selection of Gaussian Graphical Models [Link] Published in TMLR

- Developed a novel algorithm for network analysis that recovers complex structures in noisy data, enabling more robust and efficient optimization of recommendation systems, supply chains, and financial systems.
- Our algorithm transcends the fundamental limitations of current algorithms in learning complex networks.
- Implemented our algorithm on both simulated graphs and real-world networks

Rapid Change Localization in Gaussian Graphical Models [Link] | Published in ICASSP

- Developed a **novel** algorithm for rapid change localization in large-scale networked systems
- Computationally efficient and performs change localization with **provably low latency** with at least **20**% **faster than the baseline** algorithms
- Applicable to real-time system monitoring and anomaly detection in sensor networks.

Computationally Efficient Active Learning of Gaussian Graphical Models [Link] | Published in ASILOMER

- Developed a **novel** computationally efficient algorithm that achieves **exponential runtime reduction** for structure learning for large-scale networked systems
- Significantly reduced query complexity, enabling deployment in low-resource or real-time environments.

Semi-supervised Learning of Fall Down Action [Link] | Published in AICON

- Developed a semi-supervised classifier with Variational Autoencoder (VAE) and Convolutional Neural Network (CNN)
- Our classifier is at least 5% more accurate in classifying different fall down actions from a real-world data set

Efficient Smart Health Monitoring of Large-scale Networks [Link] | Published in IETC

- Developed a novel algorithm for smart healthcare monitoring, primarily using Denoising Autoencoder and CNN
- Our algorithm is at least 27% faster than the current state-of-the-art framework

Notable Projects

- Image Denoising Convolutional Autonencoder: Designed and trained a convolutional autoencoder for image denoising, achieving a 3dB PSNR improvement over baseline models using Gaussian noise. [Code].
- Summarization API: Deployed a Hugging Face summarization model as a production-grade microservice using FastAPI (API development), Docker (containerization), and Kubernetes (orchestration) with autoscaling, load balancing, and rolling updates for high availability. [Code] [Report]
- Diffusion Model API: Deployed a text-to-image diffusion model as a full-stack ML application using FastAPI for serving, Docker for containerization, and Kubernetes for scalable orchestration, integrating a web frontend, REST API, and GPU inference backend for end-to-end generative image synthesis. [Code] [Report]
- Predicted electric vehicle charging demand using a **Long Short Term Memory**, achieving a **20% reduction in RMSE** over baseline time-series models, enabling smarter grid load balancing for EV infrastructure.[Code].
- Built an end-to-end Retrieval-Augmented Generation (RAG) pipeline using LLaMAIndex and local embedding models for question answering over custom PDFs, and deployed a FastAPI interface supporting real-time queries with chunked document parsing, vector indexing, and LLM-based response generation. [Code].
- GAN for speech generation and Transformer for speech anonymization [Code].
- Notable Technical Reports: Link 1, Link 2, Link 3, and Link 4.
